

Press Release

For Release Monday 30th April, 2012

Air-IT - Expanding IT Specialists Purchase Neighbouring Premises at Nottingham Business Park

Nottingham, England, Monday 30th April, 2012 - A growing company which specialises in leading-edge information technology solutions and on-going technical support has purchased their neighbouring premises at Nottingham Business Park.

Air-IT completed the purchase of the 2,000 ft² adjoining office space on Friday 27th April. With an increased workload, Air-IT has been looking for larger premises for some time and has invested £325,000 in buying and equipping the new two-storey building.

Formed in 2005 by Todd McQuilkin, Air-IT has experienced significant growth in recent years moving into its current premises in 2010 and now employing 14 people.

The company provides outsourced IT support and managed services to businesses across Nottinghamshire and the East Midlands. It offers a wide range of tailored IT services from cloud computing and virtualisation solutions to installations and managed IT support and can effectively act as a company's in-house IT Department or complement existing resources.

Air-IT has a diverse range of clients across the East Midlands including Nottingham companies Skills Motor Coaches, Future Health Technologies, Eden Day Spa, RH Commercials and Price and Buckland.

They initially plan to make use of the whole of the first floor of the new property and will offer the remaining 1000 ft² ground floor space for rental as a fully serviced office. This will include a self-contained open plan setting with kitchen, toilet and allocated parking with leading edge IT infrastructure and telecommunications in place.

The additional space will be utilised by Air-IT to expand their current operations to cater for the increased demand for their services. It will be used for extra office space and the creation of a purpose-built high-tech training suite providing a range of customised training programmes to clients and internal staff.

The Help Desk Department, the hub of the company's IT support delivery, will also be expanded to cover the entire ground floor of the existing offices.

Air-IT has already taken on one new member of staff to cope with an increasing workload and will be recruiting further staff in the near future as the expansion programme is rolled out during 2012.

Todd McQuilkin, Managing Director said:

"We needed to expand operations to meet the growing demand of our ever increasing client base and required additional floor space to do so.

We are delighted to acquire the neighbouring building which means we can roll out our expansion plans seamlessly and continue to offer clients the best possible support and guidance with their business technology needs."

Air-IT offers potential partners a free, no-obligation on-site technology audit which highlights IT strengths, weaknesses and opportunities for improvement and includes a comprehensive recommendation report.
